ORGALIFE®

The best way is the natural way

FOR MEDICAL CANNABIS

Orgalife is liquid organic microbial worm castings fertilizer and soil improver. It can be used in organic as well in conventional agriculture. It is a universal replacement for mineral fertilizer and is suitable for production of organic food for people and animals. Orgalife fertilizer provides a balanced plant nutrition. Naturally derived microorganisms (from Californian worm castings) transform inaccessible mineral forms from the soil and air into easily accessible forms for the plant. Produces vitamins from the "B" group and antibiotics that protect the plants from phytopathological bacteria, thus reducing the need for usage of fungicides.

With usage of Orgalife the flowering of cannabis plant is better, with larger number of flowers.

CLONE PHASE

Foliar treatment 2 foliar treatments per week, 40-50 ml/liter, duration for 7 days

VEGETATION PHASE

Drip irrigation system every other day (day 1, day 3, day 5..ect),
